TITLE: Coloured magnetic toner useful in electrostatic photocopier or printer -  
contg. flaky magnetic material, giving high colour saturation

INVENTOR: BUXBAUM, G; WEISE, J

PATENT-ASSIGNEE: BAYER AG (FARB)

PRIORITY-DATA: 1984DE-3444869 (December 8, 1984)

## BASIC-ABSTRACT:

Coloured magnetic toner consists of a binder (I), colourant (II) and magnetic material (IIII). The novelty is that (III) consists of flaky particles.

Pref. (III) have the compsn. FeOx with x = 1.33-1.5, (1.4-1.5), and have a dia. of 0.5-26 microns and dia./thickness ratio of at least 5. (II) consists of strongly coloured (brilliant yellow, and/or blue) organic and/or inorg. colourant(s) and at least one white pigment with high scattering power. The toner is produced by mixing (I), (II) and (III) in mixing aggregates developing little shear.

USE/ADVANTAGE - The toner is claimed for use in electrostatic photocopier systems printers. It allows the prodn. of copies and prints with higher than usual colour saturation.

ABSTRACTED-PUB-NO: EP 184714B  
EQUIVALENT-ABSTRACTS:

Coloured magnetic toner consisting of binder, colouring agent and magnetisable material consisting of platelet-shaped or scale-like magnetisable particles, characterised in that the magnetic particles have the composition  $\text{FeO}_x$ , where  $1.33 < x < 1.5$  and the diameter of the platelets or scales is between 0.5 and 26 micro-m and their diameter/thickness ratio is at least 5. (6pp)
